The lecture will be held in English

Many research project in the ancient studies generate, collect, or reuse digital research data, ranging from texts, images, and object records to architectural and archaeological datasets. This workshop provides an introduction to the key aspects and best practices of research data management (RDM). It addresses how to organize, document, store, preserve, and publish research data to support transparency and reusability. In addition, the workshop will include discipline-specific aspects of RDM that are relevant to the programs of the Berlin Graduate School of Ancient Studies. No prior knowledge is required.

Topics include:

- FAIR Data Principles
- Data Management Plans
- Organization, metadata and documentation
- Storage and preservation
- Data publication and reuse, including licensing
- Legal and ethical issues of RDM
- RDM guidelines and institutional services
- Discipline-specific RDM aspects in ancient studies
